JOURNAL OF FLUID MECHANICS

XUM

The JOURNAL OF FLUID MECHANICS exists for the publication of theoretical and experimental investigations of all aspects of the mechanics of fluids.

EDITORS

PROF. G. K. BATCHELOR, DR H. K. MOFFATT

Department of Applied Mathematics and Theoretical Physics, University of Cambridge, Silver Street, Cambridge CB3 9EW, England

ASSOCIATE EDITORS

PROF. G. F. CARRIER, *Pierce Hall, Harvard University, Cambridge* 38, *Massachusetts* 02138, *U.S.A.*

DR W. C. GRIFFITH, *Building* 102, *Plant* 1, *Lockheed Missiles and Space Company, P.O. Box* 504, *Sunnyvale, California* 94088, *U.S.A.*

PROF. M. J. LIGHTHILL, *Department of Applied Mathematics and Theoretical Physics, University of Cambridge, Silver Street, Cambridge CB3 9EW, England*

PROF. J. W. MILES, *Institute of Geophysics and Planetary Physics, University of California, La Jolla, California* 92038, *U.S.A.*

PROF. O. M. PHILLIPS, *Department of Mechanics, The Johns Hopkins University, Baltimore* 18, *Maryland* 21218, *U.S.A.*

PROF. L. E. SCRIVEN, *Department of Chemical Engineering, University of Minnesota, Minneapolis, Minnesota* 55455, *U.S.A.*

ASSISTANT EDITORS

PROF. F. P. BRETHERTON (*Johns Hopkins*), DR M. D. COWLEY (*Cambridge*)
PROF. S. H. DAVIS (*Johns Hopkins*), DR M. E. MCINTYRE (*Cambridge*)

Authors wishing to have papers published in the JOURNAL should communicate them to any Editor or Associate Editor named above, choosing one in their own country where possible.

Authors are urged to write their papers clearly and attractively, in order to ensure that their work will be readily accessible to readers.

Manuscripts should be typed in double spacing on one side of the paper only, with references listed at the end in alphabetical order of authors. Drawings should be done in Indian ink on plain white or transparent paper, and should not be larger than 40 cm by 60 cm. Lettering should be shown clearly in pencil for reproduction by the printer, and as far as possible information relating to a figure should be placed in the caption rather than on the figure. A typed list of captions should be provided at the end of the manuscript. Proofs of papers from overseas will usually be despatched to authors by airmail. There is no charge for publication. Authors are entitled to receive 50 offprints of a paper in the JOURNAL free of charge, and additional offprints can be purchased if ordered in advance.

SUBSCRIPTIONS

The JOURNAL OF FLUID MECHANICS is published semi-monthly, except in January, May, September and December when monthly. Single parts 42*s.* 6*d.* net ($6.75 in the U.S.A.) plus postage. Four parts form a volume. The subscription price of a volume (which includes postage) is £6 10*s.* net ($22.50 in the U.S.A.).

Copies of the journal for subscribers in the United States of America are sent by air to New York to arrive with the minimum delay. Second class postage is paid at New York, N.Y.

CONTENTS TO VOLUME 42

PART 1 4 JUNE 1970

The turbulent boundary layer on a rotating cylinder in an axial stream. T-S. CHAM and M. R. HEAD *page* 1

Combined forced and natural convection with low-speed air flow over horizontal cylinders. A. P. HATTON, D. D. JAMES and H. W. SWIRE 17

Absolute measurements of static-hole error using flush transducers. R. E. FRANKLIN and JAMES M. WALLACE 33

A non-linear equation incorporating damping and dispersion. R. S. JOHNSON 49

Solitary waves in rotating fluids. W. G. PRITCHARD 61

Space-eigenvalue problems in the kinetic theory of gases. M. M. R. WILLIAMS and J. SPAIN 85

An energy principle for dissipative fluids. E. M. BARSTON 97

Velocity measurements close to the bed in a wave tank. J. F. A. SLEATH 111

A note on the stability of convection in a vertical slot. A. E. GILL and C. C. KIRKHAM 125

Flow induced by the presence of a non-conducting ellipsoid of revolution in fluid carrying a uniform current. C. SOZOU 129

Wave-induced boundary layers in a stratified fluid. R. E. KELLY 139

Instability of a two-dimensional compressible jet. C. H. BERMAN and J. E. FFOWCS WILLIAMS 151

Non-linear effects in a Rayleigh–Bénard experiment. D. R. CALDWELL 161

A finite element solution technique for the Boltzmann equation. T. TAZ BRAMLETTE and ROBERT H. MALLETT 177

On Wilton's ripples: a special case of resonant interactions. L. F. MCGOLDRICK 193

The lee-wave régime for a slender body in a rotating flow. Part 2. JOHN W. MILES 201

The oseenlet as a model for separated flow in a rotating viscous liquid. JOHN W. MILES 207

A note on forward wakes in rotating fluids. K. STEWARTSON 219

PART 2 22 JUNE 1970

Instability of erodible beds. FRANK ENGELUND 225

On magnetohydrodynamic flow in rectangular ducts: an extension of the Hunt–Stewartson approach. T. Z. FAHIDY 245

High Reynolds number flow in a moving corner. RODNEY J. TABACZYNSKI, DAVID P. HOULT and JAMES C. KECK 249

XUM

The effects of a corner on a propagating internal gravity wave. R. M. Robinson *page* 257

The laminar flow of dilute polymer solutions around circular cylinders. David F. James and Allan J. Acosta 269

The effect of trapped field on stationary waves formed at the interface of a conducting fluid and a magnet field. M. D. Savage 289

On the transition to turbulent convection. Part 1. The transition from two- to three-dimensional flow. Ruby Krishnamurti 295

On the transition to turbulent convection. Part 2. The transition to time-dependent flow. Ruby Krishnamurti 309

Kelvin–Helmholtz instability of finite amplitude. P. G. Drazin 321

Inviscid film flow over an inclined surface originated by strong fluid-injection. H. K. Kuiken 337

A theory of turbulence in stratified fluids. Robert R. Long 349

The stability of stratified shear flows. M. R. Collyer 367

On edge effects in rheometry. D. F. Griffiths and K. Walters 379

Shallow water waves on shear flows. N. C. Freeman and R. S. Johnson 401

Asymptotic theory of turbulent shear flow. Kirit S. Yajnik 411

PROF. O. M. PHILLIPS, *Department of Mechanics, The Johns Hopkins University, Baltimore* 18, *Maryland* 21218, *U.S.A.*

PROF. L. E. SCRIVEN, *Department of Chemical Engineering, University of Minnesota, Minneapolis, Minnesota* 55455, *U.S.A.*

ASSISTANT EDITORS

PROF. F. P. BRETHERTON (*Johns Hopkins*), DR M. D. COWLEY (*Cambridge*)
PROF. S. H. DAVIS (*Johns Hopkins*), DR M. E. MCINTYRE (*Cambridge*)

Authors wishing to have papers published in the JOURNAL should communicate them to any Editor or Associate Editor named above, choosing one in their own country where possible.

Authors are urged to write their papers clearly and attractively, in order to ensure that their work will be readily accessible to readers.

Manuscripts should be typed in double spacing on one side of the paper only, with references listed at the end in alphabetical order of authors. Drawings should be done in Indian ink on plain white or transparent paper, and should not be larger than 40 cm by 60 cm. Lettering should be shown clearly in pencil for reproduction by the printer, and as far as possible information relating to a figure should be placed in the caption rather than on the figure. A typed list of captions should be provided at the end of the manuscript. Proofs of papers from overseas will usually be despatched to authors by airmail. There is no charge for publication. Authors are entitled to receive 50 offprints of a paper in the JOURNAL free of charge, and additional offprints can be purchased if ordered in advance.

SUBSCRIPTIONS

The JOURNAL OF FLUID MECHANICS is published semi-monthly, except in January, May, September and December when monthly. Single parts 42*s*. 6*d*. net ($6.75 in the U.S.A.) plus postage. Four parts form a volume. The subscription price of a volume (which includes postage) is £6 10*s*. net ($22.50 in the U.S.A.).

Copies of the journal for subscribers in the United States of America are sent by air to New York to arrive with the minimum delay. Second class postage is paid at New York, N.Y.

Claims for missing issues will be considered only if made after receipt of the subsequent issue.

CONTENTS OF VOLUME 43

PART 1 17 AUGUST 1970

The non-linear refraction of shock waves by upstream disturbances in steady supersonic flow. SHELDON WEINBAUM and ARNOLD GOLDBURG *page* 1

Slow motion of two spheres in a shear field. C. J. LIN, K. J. LEE and N. F. SATHER 35

On stagnation-point conditions in non-equilibrium inviscid blunt-body flows. MARCEL VINOKUR 49

The three-dimensional mixing layer between two grazing perpendicular streams. J. E. HACKETT and D. K. COX 77

Internal waves in a wedge-shaped region. D. G. HURLEY 97

Slow flow of a fluid carrying a uniform current past a conducting ellipsoid of revolution. C. SOZOU 121

The effect of weak stratification and geometry on the steady motion of a contained rotating fluid. J. S. ALLEN 129

Experimental investigations of the stability of channel flows. Part 1. Flow of a single liquid in a rectangular channel. TIMOTHY W. KAO and C. PARK 145

The diffraction of internal waves by a semi-infinite barrier. M. J. MANTON, L. A. MYSAK and R. E. MCGORMAN 165

On the mass transport induced by oscillatory flow in a turbulent boundary layer. B. JOHNS 177

Three-dimensional boundary layer near the plane of symmetry of a spheroid at incidence. K. C. WANG 187

A variational principle for magnetohydrodynamic channel flow. NORMAN C. WENGER 211

PART 2 28 AUGUST 1970

Motion produced by combination of gravity and pressure differential when a gate in a tank of liquid is broken. W. S. CHIU, M. Y. JAFFRIN and A. H. SHAPIRO 225

The motion of large bubbles in horizontal channels. G. C. GARDNER and I. G. CROW 247

Rheometrical flow systems. Part 3. Flow between rotating eccentric cylinders. T. N. G. ABBOTT and K. WALTERS 257

The error minimization technique with application to a transonic nozzle solution. ROBERT J. PROZAN and DOUGLAS E. KOOKER 269

XUM

The stability of pipe flow. Part 1. Asymptotic analysis for small wave-numbers. W. P. Graebel *page* 279

Statistical properties of turbulent density fluctuations. L. N. Wilson and R. J. Damkevala 291

The break-up of axisymmetric liquid sheets. J. C. P. Huang 305

The approach to normality of the concentration distribution of a solute in a solvent flowing along a straight pipe. P. C. Chatwin 321

Transmission of an acoustic pulse through a plane vortex sheet. M. S. Howe 353

Fluid dynamics of the resonance tube. E. Brocher, C. Maresca and M.-H. Bournay 369

Low-frequency modulation of thermal instability. S. Rosenblat and D. M. Herbert 385

Similarity solution for a spherical radiation-driven shock wave. C. R. Wilson and D. L. Turcotte 399

The drag of a body moving transversely in a confined stratified fluid. M. R. Foster and P. G. Saffman 407

Channel flow induced by a travelling thermal wave. Chuen-Yen Chow 419

Reviews

Annual Review of Fluid Mechanics, Volume 1, *edited by W. R. Sears* 430

Thermoelasticity, by A. D. Kovalenko 432

Part 3 11 September 1970

Bottomless harbours. C. J. R. Garrett 433

Contrails and aircraft downwash. R. S. Scorer and L. J. Davenport 451

Thermal boundary-layer theory near the stagnation point in three-dimensional fluctuating flow. S. Ghoshal and A. Ghoshal 465

Periodic boundary layer near a two-dimensional stagnation point. Hiroshi Ishigaki 477

Shock propagation into inhomogeneous media. J. D. Strachan, J. P. Huni and B. Ahlborn 487

Hypersonic viscous interaction on curved surfaces. J. L. Stollery 497

Large amplitude waves in stratified media: acoustic pulses. E. Varley and E. Cumberbatch 513

A note on the vorticity expulsion hypothesis. P. A. Strittmatter, G. Illingworth and K. C. Freeman 539

Global stability of spiral flow. D. D. Joseph and B. R. Munson 545

The theory of induced voltage electromagnetic flowmeters. M. K. Bevir *page* 577

On the stability of plane flow of a conducting fluid in the presence of a coplanar magnetic field. C. Sozou 591

The radiated fields of multipole point sources near a solid spherical surface. Huw G. Davies 597

An optical study of turbulence. G. E. Roe 607

Reviews

Mechanics of Fluids, by B. S. Massey 636

Engineering Fluid Mechanics, by J. E. Plapp 636

Current Ripples, by John R. L. Allen 639

Part 4 2 October 1970

Pressure drop due to the motion of neutrally buoyant particles in duct flows. Howard Brenner 641

The fluid mechanics of the ureter from a lubrication theory point of view. Paul S. Lykoudis and Rudolf Roos 661

Sound generation by hydrodynamic sources near a cavitated line vortex. J. E. Ffowcs Williams and S. O'Shea 675

Turbulent flow drag reduction and degradation with dilute polymer solutions. R. W. Paterson and F. H. Abernathy 689

Universal stability of hydromagnetic flows. S. Carmi and D. P. Lalas 711

Scattering of aerodynamic noise by a semi-infinite compliant plate. D. G. Crighton and F. G. Leppington 721

The decay of a plane shock wave. H. Ardavan-Rhad 737

Similarity rules for thin aerofoils in non-stationary subsonic flows. J. M. R. Graham 753

Wave drag caused by a swirling flow through a convergent-divergent nozzle. Chuen-Yen Chow and Ying-Chung Lai 767

Measurements and computations of flow in pipe bends. M. Rowe 771

On the spin-up of an electrically conducting fluid. Part 2. Hydromagnetic spin-up between infinite flat insulating plates. David E. Loper and Edward R. Benton 785

The flat plate boundary layer. Part 1. Numerical integration of the Orr–Sommerfeld equation. R. Jordinson 801

The flat plate boundary layer. Part 2. The effect of increasing thickness on stability. M. D. J. Barry and M. A. S. Ross 813

The flat plate boundary layer. Part 3. Comparison of theory with experiment. J. A. Ross, F. H. Barnes, J. G. Burns and M. A. S. Ross 819

XUM

The extension of the Miles–Howard theorem to compressible fluids. G. Chimonas *page* 833

The growth of three-dimensional disturbances in inviscid flows. M. Gaster 837

JOURNAL OF FLUID MECHANICS

XUM

The JOURNAL OF FLUID MECHANICS exists for the publication of theoretical and experimental investigations of all aspects of the mechanics of fluids.

EDITORS

PROF. G. K. BATCHELOR, DR H. K. MOFFATT

Department of Applied Mathematics and Theoretical Physics, University of Cambridge, Silver Street, Cambridge CB3 9EW, England

ASSOCIATE EDITORS

PROF. G. F. CARRIER, *Pierce Hall, Harvard University, Cambridge* 38, *Massachusetts* 02138, *U.S.A.*

DR W. C. GRIFFITH, *Building* 102, *Plant* 1, *Lockheed Missiles and Space Company, P.O. Box* 504, *Sunnyvale, California* 94088, *U.S.A.*

PROF. M. J. LIGHTHILL, *Department of Applied Mathematics and Theoretical Physics, University of Cambridge, Silver Street, Cambridge CB3 9EW, England*

PROF. J. W. MILES, *Institute of Geophysics and Planetary Physics, University of California, La Jolla, California* 92038, *U.S.A.*

PROF. O. M. PHILLIPS, *Department of Mechanics, The Johns Hopkins University, Baltimore* 18, *Maryland* 21218, *U.S.A.*

PROF. L. E. SCRIVEN, *Department of Chemical Engineering and Materials Science, University of Minnesota, Minneapolis, Minnesota* 55455, *U.S.A.*

ASSISTANT EDITORS

PROF. F. P. BRETHERTON (*Johns Hopkins*), DR M. D. COWLEY (*Cambridge*)
PROF. S. H. DAVIS (*Johns Hopkins*), DR M. E. MCINTYRE (*Cambridge*)

Authors wishing to have papers published in the JOURNAL should communicate them to any Editor or Associate Editor named above, choosing one in their own country where possible.

Authors are urged to write their papers clearly and attractively, in order to ensure that their work will be readily accessible to readers.

Manuscripts should be typed in double spacing on one side of the paper only, with references listed at the end in alphabetical order of authors. Drawings should be done in Indian ink on plain white or transparent paper, and should not be larger than 40 cm by 60 cm. Lettering should be shown clearly in pencil for reproduction by the printer, and as far as possible information relating to a figure should be placed in the caption rather than on the figure. A typed list of captions should be provided at the end of the manuscript. Proofs of papers from overseas will usually be despatched to authors by airmail. There is no charge for publication. Authors are entitled to receive 50 offprints of a paper in the JOURNAL free of charge, and additional offprints can be purchased if ordered in advance.

SUBSCRIPTIONS

The JOURNAL OF FLUID MECHANICS is published semi-monthly, except in January, May, September and December when monthly. Single parts 42*s*. 6*d*. net ($6.75 in the U.S.A.) plus postage. Four parts form a volume. The subscription price of a volume (which includes postage) is £6 10*s*. net ($22.50 in the U.S.A.).

Copies of the journal for subscribers in the United States of America are sent by air to New York to arrive with the minimum delay. Second class postage is paid at New York, N.Y.

Claims for missing issues will be considered only if made after receipt of the subsequent issue.

CONTENTS TO VOLUME 44

PART 1 21 OCTOBER 1970

Simple shear flow round a rigid sphere: inertial effects and suspension rheology. CHEN-JUNG LIN, JAMES H. PEERY and W. R. SCHOWALTER *page* 1

A note on Hamilton's principle for perfect fluids. FRANCIS P. BRETHERTON 19

Cavity surface wave patterns and general appearance. CHRISTOPHER BRENNEN 33

Some cavitation experiments with dilute polymer solutions. CHRISTOPHER BRENNEN 51

The constitutive equation for a dilute emulsion. N. A. FRANKEL and ANDREAS ACRIVOS 65

Characteristics of Ekman boundary layer instabilities. D. R. CALDWELL and C. W. VAN ATTA 79

Vortex growth in jets. GORDON S. BEAVERS and THEODORE A. WILSON 97

The calculation of inviscid hypersonic flow past the lower surface of a delta wing. E. A. AKINRELERE 113

Pressure measurements in the water-entry cavity. H. I. ABELSON 129

Structure functions of turbulence in the atmospheric boundary layer over the ocean. C. W. VAN ATTA and W. Y. CHEN 145

East coast ocean currents. J. A. DURANCE and J. A. JOHNSON 161

Grid-generated turbulence in dilute polymer solutions. CARL A. FRIEHE and W. H. SCHWARZ 173

The evolution of time-periodic long waves of finite amplitude. O. S. MADSEN, C. C. MEI and R. P. SAVAGE 195

PART 2 11 NOVEMBER 1970

An issue commemorating the retirement of Professor Sydney Goldstein

Foreword 209

Boundary-layer separation at a free-streamline. Part 1. Two-dimensional flow. R. C. ACKERBERG 211

The aerodynamic noise of small-perturbation subsonic flows. ROY AMIET and W. R. SEARS 227

The behaviour of a laminar compressible boundary layer on a cold wall near a point of zero skin friction. J. BUCKMASTER 237

XUM

Stochastically driven dynamical systems. G. F. Carrier *page* 249

Aquatic animal propulsion of high hydromechanical efficiency. M. J. Lighthill 265

The transient motion of a floating body. S. J. Maskell and F. Ursell 303

On the Gunn effect and other physical examples of perturbed conservation equations. J. D. Murray 315

Is the singularity at separation removable? K. Stewartson 347

Extension of Goldstein's series for the Oseen drag of a sphere. Milton Van Dyke 365

Two-timing, variational principles and waves. G. B. Whitham 373

Review

Rheology. Theory and Applications. Vol. IV, edited by F. R. Eirich 396

Part 3 26 November 1970

Axial and transverse Stokes flow past slender axisymmetric bodies. J. P. K. Tillett 401

Slender-body theory for particles of arbitrary cross-section in Stokes flow. G. K. Batchelor 419

Thermal instabilities in rapidly rotating systems. F. H. Busse 441
